

ANTIGRAVITY LITHIUM BATTERIES

Antigravity LITHIUM-ION Powersports Batteries offer a 70% weight reduction over lead/acid batteries while providing up to 2X the Cranking Power. Just changing to our battery in a Motorcycle can save up to 10 lbs instantly. Such significant weight-loss results in better starting, improved handling, shorter braking distances, better acceleration and less unsprung weight. Combine that with a top quality design, longer service life and no toxic lead or acid, and the Antigravity Batteries Lithium-Ion Technology is a winner at every level! Now we are bringing the next generation battery forward with our new RE-START Batteries - the world's first powersports battery offering built-in Jump-Starting and a Full battery management system (BMS) with safety protections and cell balancing.

NEW SERIES for MOTORCYCLES/POWERSPORTS
